Located in Hamburg and Bremen, the Cabin & Cargo Systems department is home to more than 400 engineers. Within the Airbus Engineering community we are responsible to develop and manage a wide variety of systems located within the cabin & the cargo compartment.

Among those are the cabin management system as the heart of the cabin, safety systems such as fire protection, as well as connectivity systems e.g., for passenger WLAN. But there is much more!

The Cabin & Cargo Systems department is in need of motivated engineers able to think outside the box and willing to work cross-functional.

Together with you we want to develop the next generation of electrical, mechanical, and software systems.

On the 13th of July we want to give you an impression about what we do, how we work, and which challenges lie ahead of us. Also, colleagues who joined Airbus within the last couple of years will give an insight into their journey from university into the job and the work they do now.
